# Directions for Gluing the Laser Cut Parts Together

---

- Dry fit the parts first, before gluing to understand how they go together.
- Regular white wood glue works best to assemble the laser cut wood parts and apply the leather hides as it provides time the position the parts and excess glue can be removed with a damp cloth.
- Use a small applicator tip, or applicator to avoid over applying the glue.
- Applying glue the back of the hides a finger works well.
